Platform Share: Leanback (CTV) Leads Decisively

Leanback (connected TV) is the primary screen — 68% of all hours (44,010 of 64,610) and 66% of customers (71,525 of 108,661) run through it.

Web shows the deepest engagement per user — 0.70 hrs/customer, ahead of Leanback's 0.62, despite carrying only 23% of hours.

Mobile is under-indexed — iOS and Android hold 15% of customers but just 9% of hours; iOS engagement (0.36 hrs/customer) and Android (0.37) trail CTV and Web by roughly half.

Audience Segment Mix: A Power-User Base

Heavy viewers dominate — 72,320 customers (200+ sessions) make up 66.6% of the entire base.

94% sit in Regular or Heavy tiers — Regular viewers (30,023) add another 27.6%, leaving Light and Occasional combined at just 5.7% (6,318 customers).

This is a retention, not acquisition, story — very few customers sit at the low-engagement end, pointing to a mature, habituated subscriber base.

Day-of-Week Behavior: A Clear Weekend Climb

Viewing rises steadily across the week — from 8,181 hours Monday to a peak of 10,244 hours Sunday, a +25% climb.

Weekends beat weekdays by 12.7% — Sat/Sun average 10,039 hrs/day versus an 8,906 hrs/day weekday average.

Friday shows an early lift — 9,225 hours is already 3.6% above the Mon-Thu average, suggesting weekend viewing intent starts Friday evening.

Catalog vs. Generic Browsing: A Stable 2:1 Ratio

Known titles consistently win — 67.4% of weekday hours (30,023 of 44,532) and the identical 67.4% of weekend hours (13,540 of 20,079) go to known catalog titles.

Generic browsing halves on weekends — 6,539 hours vs. 14,509 on weekdays, even though total weekend hours per day are higher — weekend sessions look more intentional.

About a third of hours are still undirected — a stable but sizeable discovery gap that better personalization and recommendations could convert into direct engagement.

Quarterly Trend: A Sharp Spike, Then Partial Retreat

Hours by Quarter: Weekday (bars) vs. Weekend (line)

Hours grew more than 10x — from 4,965 total in Q4 2020 to 50,173 in Q1 2021, before falling back to 9,473 in Q2 2021.

The weekday/weekend mix held roughly steady — the spike lifted both weekday and weekend viewing together rather than reshaping weekly habits.

Retention after the spike was partial — Q2 2021 hours are nearly double Q4 2020, suggesting some newly engaged viewers stuck around.

Caveat — confirm the date ranges behind each quarter; an uneven number of days per bucket could account for part of the swing.

Play Event Share: Live TV Still Rules

Live TV drives 74% of play events — real-time, linear-style viewing remains the dominant consumption mode for this audience.

Catch Up captures 15% of plays — a meaningful secondary behavior showing real appetite for flexible, on-demand replay of missed broadcasts.

"Other" events total 11%, while Downloads are negligible and don't register a visible share — offline viewing has not gained traction here.

Recommendations

1

Double down on Leanback/CTV

It drives 68% of hours — prioritize CTV app performance, remote-friendly navigation, and on-screen recommendations.

2

Re-engage mobile audiences

iOS and Android hold 15% of customers but only 9% of hours; test push notifications, mobile-exclusive content, and companion features.

3

Protect the heavy-viewer core

66.6% of the base is Heavy tier — build loyalty perks, personalized queues, and early access to defend this revenue driver.

4

Convert generic browsing to catalog engagement

~33% of hours are undirected; strengthen search and recommendations, especially on weekdays.

5

Program around the weekend & Friday lift

Weekend viewing runs +12.7% above weekday; schedule premieres and marketing pushes Friday through Sunday.

6

Expand Catch Up & validate the Q1 2021 spike

Catch Up already holds 15% of plays; grow it further, and confirm whether Q1's 10x surge was event-driven or a reporting-window artifact.
