

Viewership Analytics Project

Project Scope, Objectives, and Expected Analytical Deliverables

Project:	Viewership Analysis (BrightTV)	Domain:	Digital Media & Streaming Analytics
Author:	Data Analytics Team	Tools Used:	SQL, Excel, Power BI, PowerPoint

1. Project Background & Objective

The **Viewership Analytics Project** was commissioned to evaluate user streaming behaviors, platform consumption patterns, and audience segmentation across the BrightTV ecosystem. The goal was to transform raw streaming logs and user metadata into actionable insights to inform content scheduling, marketing strategy, and platform development.

2. Scope of Work & Tooling

- Data Extraction & Aggregation (SQL):** Clean and query user session tables, aggregated viewing hours, and customer IDs to build analytical datasets.
- Data Modeling & Calculation (Excel):** Conduct exploratory data analysis, perform pivot calculations, and build structural data tables for platform and cohort metrics.
- Interactive Data Visualization (Power BI):** Build executive dashboards to track overall viewership volumes, day-of-week trends, and engagement ratios.
- Executive Deck & Presentation Design (PowerPoint):** Translate raw metrics into visually polished executive slides with chart callouts and strategic takeaways.

3. Expected Project Deliverables

Analytical Focus	Required Deliverable	Business Objective / Target Output
Executive KPI Metrics	High-level summary card dashboard	Track total viewing hours, active subscriber count, and primary platform shares.
Platform Distribution Analysis	Comparative multi-axis chart	Identify total hours watched versus customer volume across Leanback (CTV), Web, iOS, and Android.
Audience Tier Segmentation	Behavioral cohort distribution	Categorize subscribers into Light, Occasional, Regular, and Heavy viewing tiers based on session counts.
Temporal Consumption Trends	Day-of-week & quarterly trend line charts	Measure viewership growth patterns, weekday vs. weekend spikes, and quarterly trajectory.

Analytical Focus	Required Deliverable	Business Objective / Target Output
Content Discovery Behavior	Catalog vs. generic browsing breakdown	Evaluate intentional catalog searches against undirected browsing hours.
Play Event Types	Proportional share donut chart	Measure total play distribution across Live TV, Catch-Up VOD, and Other formats.

4. Strategic Recommendations Framework

Upon completion of the analytical tasks, the project required a set of prioritized strategic recommendations in the final PowerPoint presentation to address:

- Key application optimization targets across dominant hardware screens.
- Tactics to increase engagement on under-indexed mobile platforms.
- Marketing and content release schedules tailored around peak viewing days.
- Enhancements for content recommendation engines to convert generic browsing into direct catalog watch time.
